

Semi-Automatic Over Capper Machine - OCM-6.000 S

This machine is designed to cap metal cans (tomato paste, solid oil, powdered milk, fish, tomato chips, coffee, etc.) with plastic lids.

- Operator puts the plastic lids in the chute. Machine automatically puts the lids on the metal cans.
- Designed to use wide variety of flat caps as thin as 3 mm (soft or hard material)
- All body made of stainless steel 304
- An optic sensor is installed on lid chute to stop the machine when there is no sufficient number of lids.
- Machine is designed according to the diameter of metal cans. Capping mechanism can be easily adjusted to meet the cans with different height.
- Different cans (in diameter) can be capped by ordering relevant change parts
- Capping speed adjustment by means of frequency inverter
- Adjustable pressure of placing the plastic lids on top of the metal tins
- Capping speed up to 100 cans / minute (Depending on performance of operators)
- Options :
 - Mechanism for counting output tins
 - Mechanism for sorting out the lidless tins on output side
