

Powder blenders (for dry materials)

Two widely used models of powder blenders for mixing dry powder materials are made in this company in different volumes.

1- V-shaped blender – Blender

2- Double Cone Blender

These blenders mix the materials using the weight and the centrifugal force created by the drum period.

The advantages of these blenders over other existing blenders

- Short mixing time
- Proper mixing efficiency
- Ability to install the second wall to apply heat to the product in the Double Cone model
- Ease of charging, discharging and complete discharge
