

Loop & Holder

- Loop and holder mechanism is suitable for filling and capping machines.
- This system is used for low stability or not symmetrical containers.
- In this mechanism, holders circulate in a closed loop. The Operator loads empty bottles into holder. After the bottles are filled and capped, operator unloads the bottles and empty holder returns to the starting point.
- Low speed loop mechanism: CM3.000 + 2PF3.000
- High speed loop mechanism:
CM10000 + 8PF 9000 or CM20.000 + 8PF 9.000
- Note: relevant information for any of the above machines could be checked in the related pages.
